PROVIDING EXPERTISE ON A FAULTY INTRANET

Implementing a SharePoint 2013 solution for a Major Regional Healthcare Provider

Magenic was able to provide a team of experts not only on the SharePoint platform, but also in content management, strategy, and design.

Situation

A major regional healthcare provider needed to update and expand its existing intranet. Due to an assortment of technology challenges and content disorganization, users operating under the same umbrella and performing similar functions were inconsistent with one another. The client wanted consistency, but knew a complete overhaul of the system would be required. Magenics completed an eight week assessment to show how the client could transition from SharePoint 2007 to SharePoint 2010. After seeing the transformative changes Magenics proposed, the client chose the new Microsoft SharePoint 2013 Online cloud-based offering to fully benefit from Magenics's ability to get the most out of a SharePoint implementation.

Solution

Magenics worked closely with the client in a very iterative development environment. By working directly with the people that use the system, Magenics was able to give them exactly what they were looking for in an intranet.

The new SharePoint 2013 Online solution housed the content and made it easy to update, aggregate, and navigate. It had a robust search engine that made sorting and finding files exponentially more efficient. Additionally, the new system utilized the full functionality of the Microsoft SharePoint 2013 Online cloud-based solution, which offered the client even more flexibility and productivity.

Results

Needing to revitalize a client's content portal to make it more robust and well-organized, Magenics was able to provide a team of experts not only on the SharePoint platform, but also in content management, strategy, and design. In addition, Magenics's leading edge knowledge of how to make the most of the newly released SharePoint 2013 Online cloud-based platform made contributions to the project as a whole invaluable. What started as a disconnected, inefficient intranet turned into a much more integrated system that kept users in sync with one another in order to perform their day to day jobs more effectively.

Magenic // Software to move forward.™
